A Walk in the Park

Kevin Casas

"A Walk in the Park" is a project with the intention of helping visitors navigate through the Emerald Necklace park system, as well as giving them the feeling of exploration in the parks.

Initial Research

1. Benches
   - Benches are very low to the ground, dirty
   - No benches on the crossing path

2. User Retention
   - People mostly walk straight through the park
   - People usually don't stick around to explore the park

3. Security
   - People think about the Back Bay Fens in a negative light

Further Observations

Playground & Victory Gardens

- Playground & Victory Gardens
- No signs pointing to any locations in the park
- Playground located in isolated location
- Victory Gardens also set apart from everything

Interviews

- People use the park mostly for a passage to locations other than the park (eg. Target, Fenway Park)
- People usually don't stick around to explore the park

Conclusion

People have trouble finding and knowing about all of the attractions that the parks have to offer.

I propose that a unified wayfinding system that shows parkgoers how to get to their destination while keeping off of their phones, is the best solution to this problem.

Final Designs
