Our Mission

The feeling of walking down Newbury Street with friends is special– it's a feeling that is lost in the world of online shopping. Zealery brings that feeling to mobile devices with a platform that allows users to shop as if on a mission, or browse and gather friends' opinions, all at the touch of a button.

Brand Identifiers & Assets

zealery

zealery

zealery

zealery

Primary Brand Identifier

The primary Zealery brand identifier is the stacked hanger and logotype. The logo may be used in black and coral on light backgrounds and in white on colored and black backgrounds.

zealery

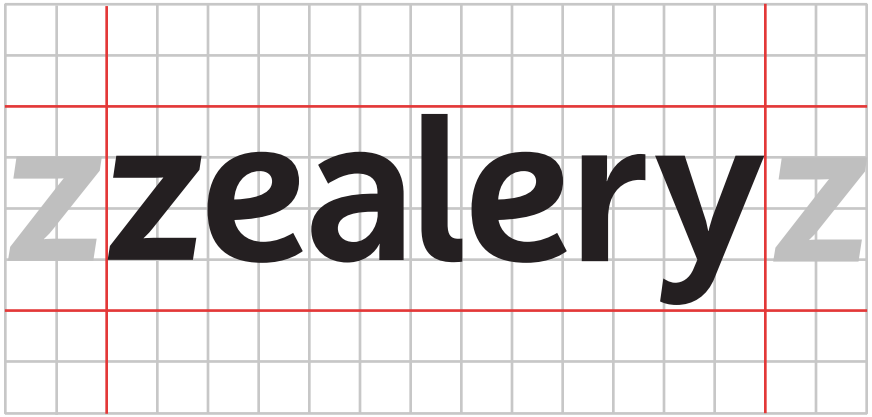
zealery

zealery

zealery

Secondary Brand Identifier

The secondary Zealery brand identifier is logotype. The logotype may be used in instances that the primary identifier is too large for, or when deemed otherwise appropriate. Coral, black, and white versions should be used with the same discretion as the primary identifier.

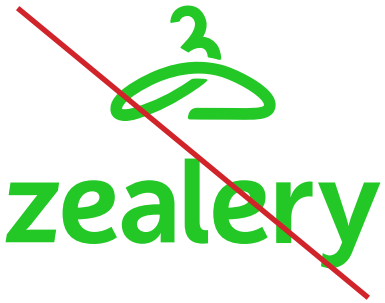


Exclusion Zone

When in use, the Zealery logo must be surrounded by sufficient white space. Roughly, the white space should be equal to the height of the logotype's z.

Don’t apply effects to the logo.

Don’t change the orientation of the logo.



Don’t apply off brand color to the logo.

Don’t stretch or squeeze the logo.

Don’t rearrange the stacked logo.

Don’t place the logo on a dark color.

Logo Misuse

Avoid altering the Zealery brand identifiers at all costs.

Museo Sans

This is a headline in Museo Sans 500

Roboto Slab

This is body copy in Roboto Slab Light

Marketing Typography

Museo Sans 500 and Roboto Slab Light should be used on all marketing materials and collateral for Zealery. Be sure to use the two typefaces to create contrast between headline text and body text.

Museo Sans and Roboto Slab may not be used anywhere in Zealery's mobile interface.

Too many cha...

Titles have a character limit of 12 characters (including spaces). To indicate, follow with ellipsis.

Text Styles

Character styles within the CSS of the app should be as stated above.

Coral	Teal	Charcoal	Gray	Light Gray
#F66957	#5CBFD5	#4a4a4a	#5b5b5b	#EEEEE
RGB(246, 105, 87)	RGB(92, 191, 213)	RGB(74, 74, 74)	RGB(155, 155, 155)	RGB(238,238,238)
C 0	C 59	C 66	C 42	C 5
M 74	M 4	M 59	M 34	M 4
Y 64	Y 13	Y 57	Y 35	Y 4
K 0	K 0	K 39	K 1	K 0

Accent Colors

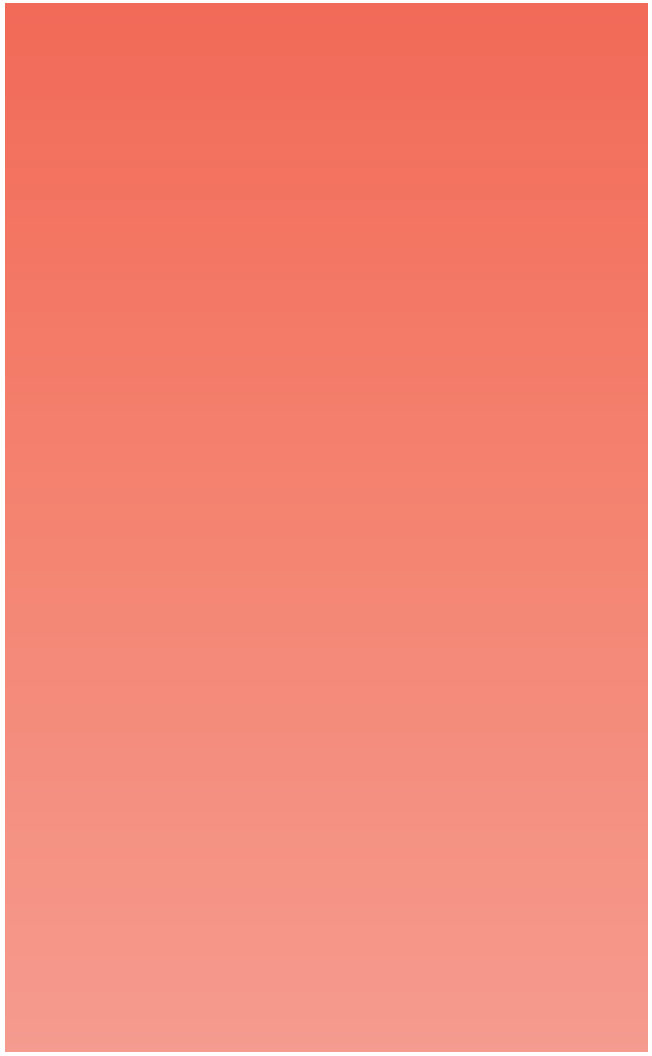
Accent colors are used to highlight and draw attention to specific areas. Coral should be used the majority of time, while teal should only be used to highlight Runway features.

In the app, use coral and teal as the accent colors for buttons and links.

DO NOT use coral or teal in places on the app that are not clickable.

White and Gray

White should be the most used color (i.e. background color), with the gray colors being used primarily for text colors.



Coral
#F66957
Location: 100%

Light Coral
#FC9E8F
Location: 0%

Gradient Background

To differentiate certain screens within the app, it is okay to use a gradient background (ex: onboarding screens, playing a runway).

DO NOT use any other color as a screen background, including solid coral.

DO NOT use the gradient background on screens excessively.

Button

Buttons

Small buttons are used primarily for navigation between screens of the app.

Large buttons are used for actions, unless there are size restraints.

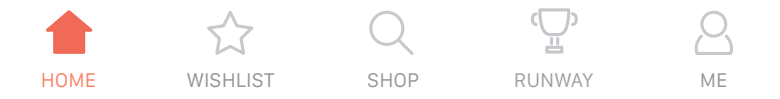
Global Icons

All icons used in the app should be from the above set, or be made following the guidelines on page 15.

Inactive
#cecdcd

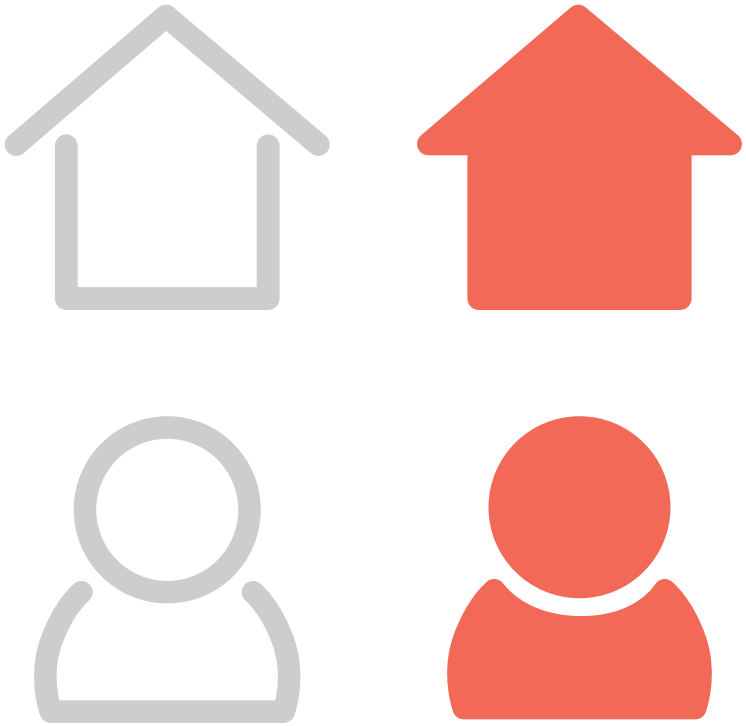
Active
#F66957



Text: #929292
10pt, San Francisco Regular, all caps

Navigation Bar Icons

Icons for navigation are filled in and considered "active" when the user is currently navigated to that tab.



Icon Design Guidelines

All icons should have a stroke applied, whether or not they are line icons or filled in icons. This keeps the shape and edges of all icons visually similar.

Design with simple shapes and outlines. Not all lines need to connect to each other; leaving certain lines disconnected (when successful) is part of our visual language.

STROKE WEIGHT: 1pt - 1.5pt
CORNERS: Rounded
ENDS: Rounded

DO NOT leave any ends or corners unrounded, on any icons.

DO NOT create any icons without a stroke.

DO NOT use fill color unless it is for an icon in an active state.

User Interface

Height unrestrained

Width restrained

Two-Column Item Feed

In Recommendations and Search, the two-column item feed is used. The width of each picture is restrained while the height is unrestrained, creating a masonry grid of images.

Height unrestrained

Width restrained

Three-Column Item Feed

In Wishlist, where a three-column item feed is used, the width of each image is restrained while the height is unrestrained, creating a masonry grid.

Activity feed

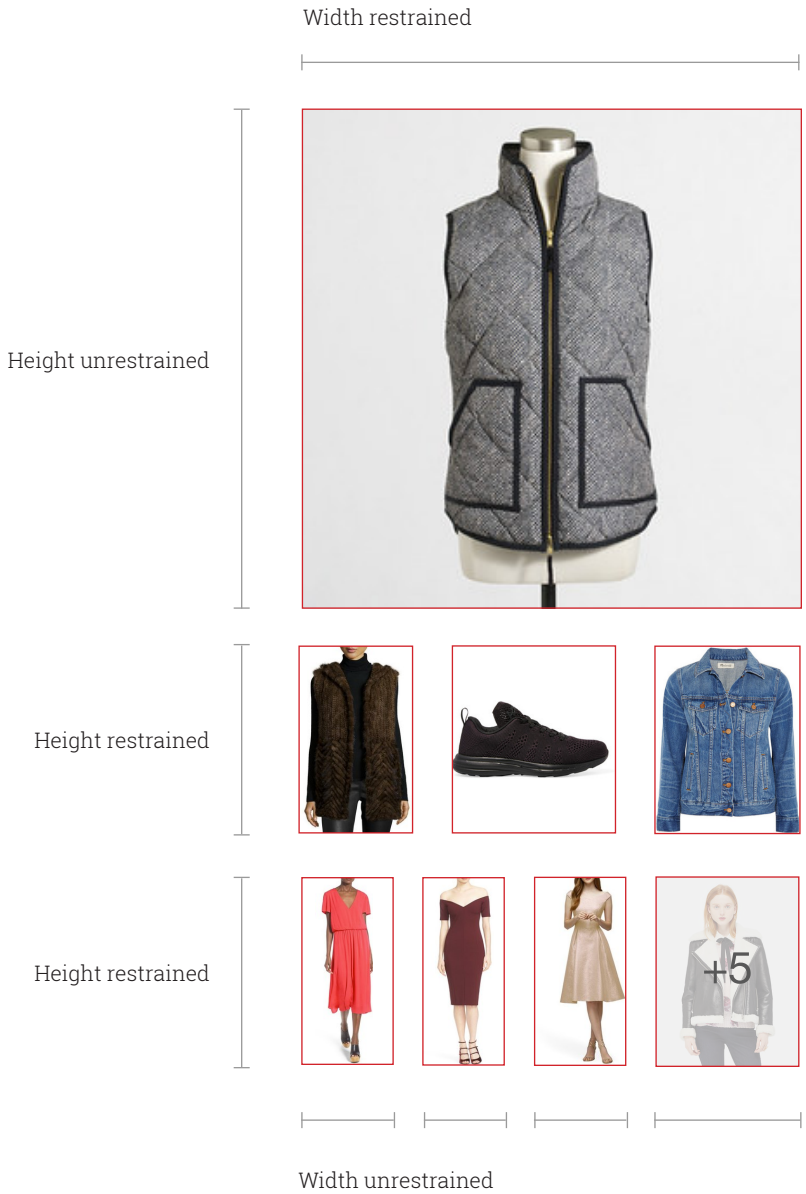
The layout for images in activity feeds is based on the number of items in the post.

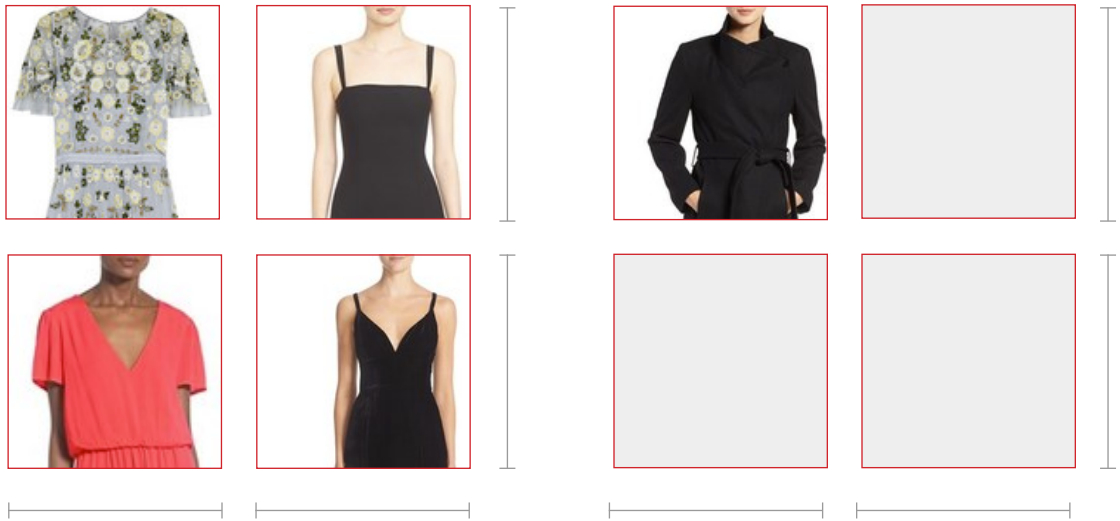
If there are 1 or 2 items in the post, the width is restrained and height is unrestrained.

If there are 3 or 4 items in the post, the height is restrained and the images have an unrestrained width.

If there are more than 4 items in a post, use an overlay on the last image that indicates how many more items are in the post.

In a 3 or 4 item post, restrain horizontal images in a square with the height of the column so as to avoid excessively large widths.





Square restraint

Wishlist Filters

When Wishlists are filtered by brand or by item kind, the preview for those filters should be displayed by a 4-image square grid. The height and width of each picture is restrained and cropped.

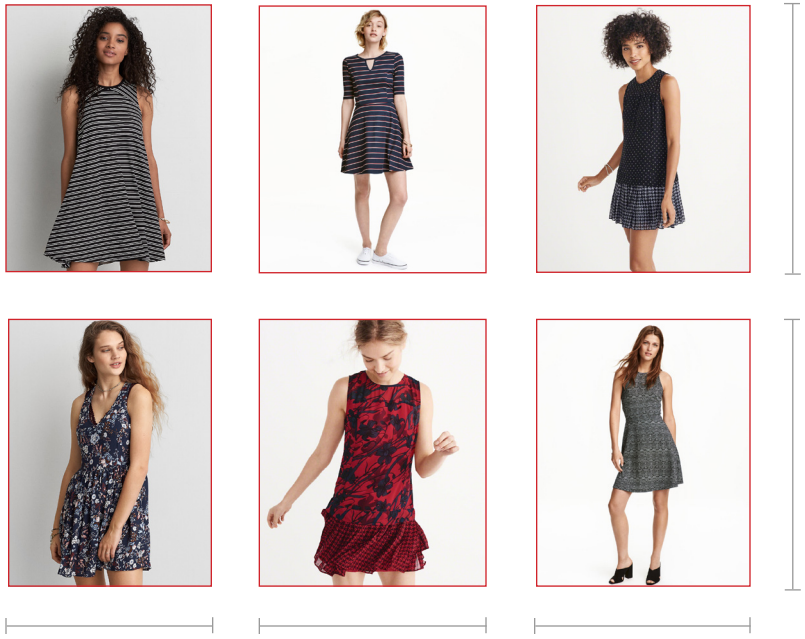
When there are less than 4 images in a certain filter, use a gray square in place.

Height restrained

Width restrained

Runway Play

While playing a runway, the images are restrained by width and height and cropped to fit those dimensions.



Runway Results

Runway results are displayed in rows of three with the height restrained, leaving width unrestrained. If there is a row left with less than 3 images, leave a the empty spot(s) blank.
